### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Roland Long #41,949 on May 10<sup>th</sup> 2004.

The application has been amended as follows: Claim 31, line 11 (on page 16 of amendment) "...black on completion of the adaptive thresholding;" should be "...black on completion of the adaptive thresholding;"

### **Reasons for Allowance**

The following is an examiner's statement of reasons for allowance:

The present invention pertains to a system and method for locating a fault in an integrated circuit. The integrated circuit is connected with a tester, which applies test vectors to the circuit under test, and measures the current consumption at rest IDDQ, to detect short circuit faults. Furthermore, the integrated circuit is placed in potential contrast: electron microscopy imaging system, detecting secondary electrons that produce a set of vector images representing equipotential lines created by the circuit tracks and logic gates. A sequence of location vectors is generated on the basis of the previously formed sequence of test vectors. Each test vector for which the binary signal of at least one input terminal is capable of changing logical state is broken down into a

plurality of location vectors, the binary signals of which do not change logical state. The location vectors are applied to the input terminals step by step. The value IDDQ is measured for each vector, and it is determined whether that value is normal. The location vectors for which the value IDDQ is abnormal are applied next, followed by a set of images of the circuit potential in which contrast is produced. Finally, by comparing the abnormal vector images with prerecorded reference images, the malfunctioning logic gate is located in the integrated circuit.

The prior arts of record (U.S. Patent No. 5,790,565 Sakaguchi being the closest example of prior art) disclose a test system for an integrated circuit, which uses a combination of a functional test with a current consumption test at rest IDDQ. It is clear that this test configuration is different from the one used in the present invention. However, none of the prior art of record, taken either alone or in combination discloses the IDDQ test in combination with potential contrast electron microscopy imaging system. As such, modification of the prior arts of record can only be motivated by hindsight reasoning, or by changing the intended use and function of the prior arts themselves. As such, it is not clear that one of ordinary skill in the art at the time of the invention would have made the necessary modifications to the prior art of record to encompass the limitations set forth in the independent claims 1 and 33.

### ***Drawings***

The drawings were received on April 29, 2004. These drawings are not acceptable for publication.

The drawings filed on April 29, 2004 are acceptable subject to correction of the informalities indicated in the interview of May 10, 2004. Some of the corrected drawings submitted with the requested corrections have text over the lines of the drawings. This overwrite render the drawings unclear to the reader. In order to avoid abandonment of this application, correction is required in reply to the Office action. The correction will not be held in abeyance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cynthia Britt whose telephone number is 703-308-2391. The examiner can normally be reached on Monday - Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Albert Decady can be reached on 703-305-9595. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system.
